

Investment, M&A and Venture support

Oxbridge drives growth by assisting expanding companies in investment readiness and accessing funding resources. OxBridge is currently authorized to administer the DTI grant for Investigating Innovative Ideas. This is a grant of up to £12K for engaging consultants and mentors to help businesses develop new commercial innovations.

We lead on:

- Investment readiness analysis, planning and strategic implementation for both dynamic technology entrants seeking funding and global corporations looking to invest
- Corporate Finance and Venture Capital consultancy, matching growth potential to investment goals
- Grants* and Support access, management and planning
- Specialised financial management of Asian/European collaboration and acquisitions.

We establish on behalf of our clients a UK holding company to act as a financial vehicle for attracting international private equity and venture capital investment, keen to participate indirectly in China. The holding company uses these funds to acquire stakes in European technology businesses where collaborative trade with the Chinese parent should ensure substantial growth. Acquisition of European technology ventures by Chinese corporations represents an attractive investment proposition for financial institutions, as it offers the potential for rapid growth transformation through access to the large Asian market for the European entity's technology and that the European entity will be utilized as a sales channel for the wider corporate product line. Contact us for more information and to discuss how Oxbridge could assist your growth through Investment, M&A and Venture support.

Our Sector Experience page shows how we have helped some of our customers achieve excellence through Investment, M&A and Venture support consultancy.
